

LEED®-NC 2.2 Documentation

**Credit MRc2.1 and 2.2 – Construction Waste Management Divert 50% or 75% from Disposal**

Valued LEED Partner:

The Stanza Wall System is a non-load bearing demising wall that contains 88% recycled/recyclable content that is easily diverted from the waste stream. The minimal trim left over from installation can be diverted into a recycling program to become post-consumer content in another product, avoiding being dumped into a landfill.

We verify the claims about the Stanza Wall System in this letter to be true. This document is correct as of the date listed and will be updated only when/if the product changes.
